ARPANET and Internet:

A Bibliography of BBN Papers

September 1994

Bolt Beranek and Newman Inc.

Cambridge, Massachusetts

Introduction

Early in the planning of "The History of the Future: ARPANET, Internet, and Beyond," the festivities celebrating the 25th anniversary of the delivery of the ARPANET, several of us "BBN ARPANET pioneers" concluded that since the ARPANET is now history, and several books are being written about it, we should try to pull together a complete bibliography of BBN publications relating to the ARPANET and Internet. We defined a "BBN publication" as a paper with at least one author who was at BBN at the time it was written. We also looked for publications that appeared in the open literature (RFCs, for example, are not included). This volume, *ARPANET and Internet: A Bibliography of BBN Papers*, contains the bibliography we compiled.

It is possible that we missed a paper that should have been included in the bibliography or included a paper written by an author just outside the author's time at BBN. If so, the error was unintentional, and we will appreciate receiving corrections in case we produce a revised edition of the bibliography.

In addition to giving copies of this bibliography to people who attend the 25th anniversary celebration in Boston, Massachusetts, we will be sending copies to a few libraries where historians are likely to look for material on the history of the ARPANET and Internet. We will also make it available as an RFC.

Being at BBN, we were in a position to compile a bibliography only of BBN papers on the ARPANET and Internet. The total number of papers on this subject must now be tens of thousands. We hope that other institutions that have been deeply involved in the ARPANET and Internet will also make bibliographies of their papers available, if they haven't already done so.
